

## Investment Review

The Hereford/DSM US Large Cap Growth Sub-Fund depreciated 5.9% for the month of September compared to a (5.44)% return for the Russell 1000 Growth Index and a (4.77)% return for the S&P 500 both including dividends. At the end of September, the Sub-Fund was invested in the technology, financials, communication services, consumer discretionary, health care, industrials, materials and consumer staples sectors.

For the month, the Sub-Fund trailed the benchmark by approximately 47bps. This was primarily the result of the Manager's selections in financials. The Manager's selections in technology benefited performance. In September, the positions that detracted the least from the portfolio's return were Neurocrine Biosciences, Aon PLC, Fortinet, Chipotle Mexican Grill and Boston Scientific. The positions that detracted the most in the month were NVIDIA, Amazon.com, Adobe, Alphabet and Microsoft.

## Manager's Commentary

In the Manager's opinion, global economic growth over the coming year will be determined in large part by the rate of decline of inflation in the EU and United States, as a result of Federal Reserve and ECB tightening. The more rapidly inflation falls, the less pressure there will be on the Federal Reserve and ECB to raise rates further, thereby enhancing the potential for a "soft landing" or "muddle through" economic outcome. At this point the most recent inflation data in both the US and EU continue the trend of significantly declining inflation, albeit the results are still above both central banks' targets of 2%. Importantly, this data makes additional rate hikes by each central bank appear less urgent and less likely, and not a moment too soon as French and Italian government borrowing costs have hit their highest levels in a decade, adding budgetary stress that governments on either side of the Atlantic can't afford. In addition, inflation of 2% to 3% would, in our opinion, put the ten-year US Treasury at a yield of 200 basis points over the rate of inflation or 4% to 5%, its current level today.

DSM believes that global and US economic growth approximating 2.5% over the next year is achievable, while in Europe and Japan, GDP will be closer to 1%. Higher interest rates in the US may be having an impact on the real estate market, especially with the ten- and thirty-year mortgage rates in excess of 6% and 7% respectively. It is possible that consumer spending will weaken as inflation-driven expenses rise causing many Americans to spend much of their savings. In addition, student loan repayments are restarting and oil prices are quite high. Logically, currently rising default rates confirm these stress points. On the other hand, incomes appear solid, wages are up and employment is strong. Clearly, with no recession in sight, the US economy has performed better than expected. At this point, excluding a significant unexpected shock, the Manager believes that if the economy were to weaken, a "soft landing" or shallow recession would be a more likely outcome than a more normal contraction.

Returning inflation to the 2% level is the target of both the Federal Reserve and the European Central Bank, but it will not happen overnight. Many commentators doubt the resolve of the central banks given political pressure to reduce interest rates. However, the reality is that the central banks have little choice. Government debt on both sides of the Atlantic is extremely large and growing. Low inflation means lower interest expenses on government debt, while high inflation means budget-busting interest costs that governments cannot afford. For that reason, DSM believes central banks will remain focused on tight money supply and lower inflation. "Higher for longer" is the current media refrain to describe central bank interest rate policies, which implies the implementation of additional rate hikes. In the Manager's view a more accurate description of the situation is "current rates for as long as it takes" or perhaps "one and done," and they believe the rate hike cycle is nearing an end.

The Sub-Fund portfolio remains reasonably valued with an underlying earnings growth rate in the high-teens. The Manager believes they have assembled a portfolio of dominant and attractively valued companies including many which, in their view, are poised to benefit from AI and other significant digital drivers over the years to come. As the economy continues to grow, albeit slowly, and inflation continues to fall, the probability of a significant recession declines. DSM continues to expect that global markets will trend higher despite well-publicized macro and geopolitical risks.

## Investment Objective

The investment objective of the HF-DSM US LCG is to provide capital appreciation principally through investments in US-based growing corporations with market capitalizations generally above US\$ 5 billion. These companies are chosen for their growth prospects, attractive returns, solid business fundamentals and intelligent management. The sub fund may, on an ancillary basis, invest in US-based companies with lower market capitalizations as well as in non-US based companies. The Compartment may invest in American Depositary Receipts and American Depositary Shares. The reference benchmark for this strategy is the Russell 1000 Growth Index.
